

Cse-325 Lab Task

Don't Be Afraid or Panicked

Just Show your Effort and chill

1. Access to the Desktop Directory and show the files of the desktop
2. Create a directory with the name of Lab_task1
3. Grant the read, write and execute permission for Desktop *Directory*
4. then create two more sub-directories into the Lab_task1 directory called lab02a and lab02b.
5. Now, access lab02a folder and create a file name called EWU and the file type should be bar
6. Then jump to the directory lab02b and create a file name lab and the file type should be txt
7. Open the lab.txt file and write the below message

"Linux CLI Is not Easy as you think"

8. then save it after that *using the same lab.txt file* create another file name new_lab.txt file and add another text that is

"Windows is for child"

9. You should not separately use editor to edit new_lab.txt

10. Now, create another txt file in lab02a and move the file to lab02b Directory

11. Delete the lab02b directory

12. Grant all permission for lab02a Directory and show it

13. Change Default Permission of lab02a such that write permission is added to user and others have only read permission also group should have execute permission

14. Now, come to the Lab_task1 directory and create two text file called task.txt which should contain that text

1

89

90

And another file task2.txt

which should contain that text

56

78

90

15. Merge task.txt and task2.txt in a new file called final.txt

16. Sort the final.txt file and show it then move to your home directory

Bonus Section

Go to the root directory and show the path from root to Lab_task1
